

WiFi Configuration via Browser

Preparation

- Power on the inverter.
- Make sure the router is turned on
- Switch on the WLAN of laptop.

Look for the WiFi signal **"Solar-WiFi*"** (* means the last 8 characters of the inverter SN) in WLAN center and connect it. Password: **12345678**

Note

1
Please make sure there is no other devices connected to the same Solar-WiFi*.

2
The first indicator on the inverter cover should be double blink when connecting the "Solar-WiFi*".

Click "Log In" to enter configuration page

WiFi Configuration via Browser

4

Click "start Setup"

Device information	
Firmware verison	1.6.9.3.38.2.1.38
MAC address	60:C5:A8:60:33:E1
Wireless AP mode	Enable
SSID	Solar-WiFi
IP address	10.10.100.253
Wireless STA mode	Disable
Router SSID	WiFi_Bum-in
Encryption method	WAP/WAP2-PSK
Encryption algorithm	AES
Router Password	WiFi_Bum-in

Cannot join the network, may be caused by:
router doesn't exist, or signal is too week, or password is incorrect

★ **Help:** Wizard will help you to complete setting within one mimute.

[Start Setup](#)

5

Select Wi-Fi router's SSID and click "Next"

Please select your current wireless network:

SSID	Sec mode	Enc type	Channel	RSSI
<input checked="" type="radio"/> WiFi Test	WAP2-PSK	AES	6	54%

★ **Note:** When RSSI of the selected WiFi Network is lower than 50%, the connection may be unstable, please select other available network or shorten the distance between the device and the router.

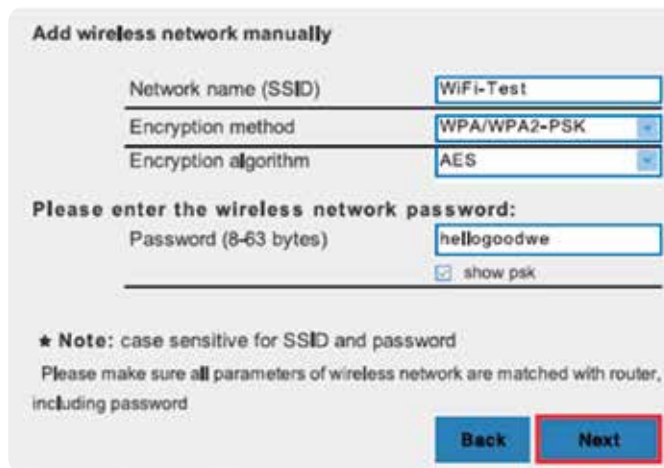

If your wireless router does not broadcast SSID, please click "Next" and add a wireless network manually.

WiFi Configuration via Browser

6

Fill in the password for your WiFi network.

Add wireless network manually

Network name (SSID)

Encryption method

Encryption algorithm

Please enter the wireless network password:

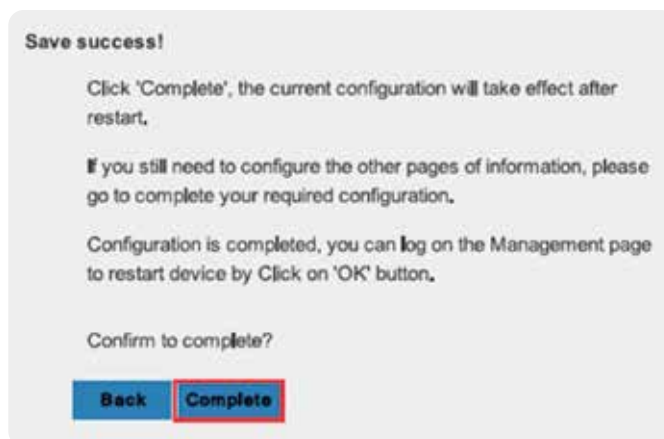

Password (8-63 bytes)

show psk

★ **Note:** case sensitive for SSID and password
Please make sure all parameters of wireless network are matched with router, including password

7

7. Click 'Complete' and the configuration process completes.

Save success!

Click 'Complete', the current configuration will take effect after restart.

If you still need to configure the other pages of information, please go to complete your required configuration.

Configuration is completed, you can log on the Management page to restart device by Click on 'OK' button.

Confirm to complete?

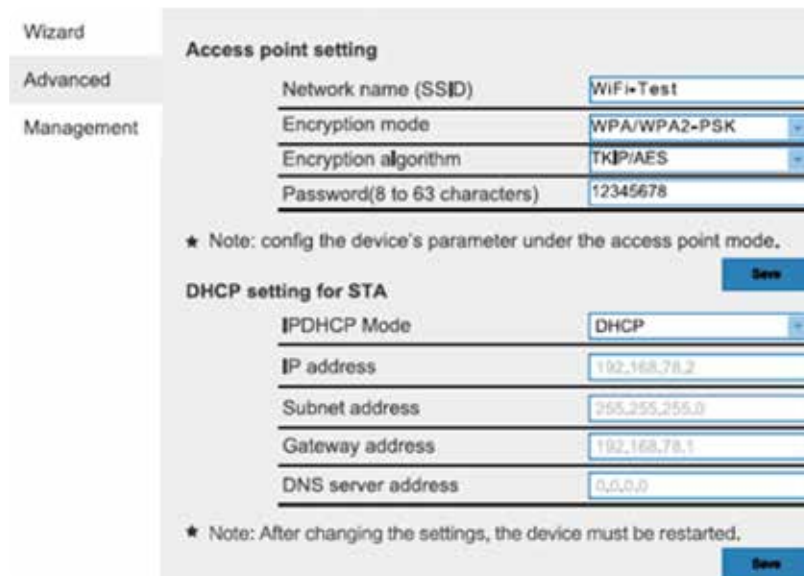

Note

You can modify the Wi-Fi module's SSID or/and password in the 'Advanced' interface.

WiFi Configuration via Browser

8

(Skip this step unless it is necessary)

The screenshot shows a web interface for configuring WiFi settings. On the left, there is a sidebar with 'Wizard', 'Advanced', and 'Management' options. The main content area is titled 'Access point setting' and contains the following fields:

Network name (SSID)	WiFi-Test
Encryption mode	WPA/WPA2-PSK
Encryption algorithm	TKIP/AES
Password(8 to 63 characters)	12345678

★ Note: config the device's parameter under the access point mode.

Save

DHCP setting for STA

IPDHCP Mode	DHCP
IP address	192.168.78.2
Subnet address	255.255.255.0
Gateway address	192.168.78.1
DNS server address	0.0.0.0

★ Note: After changing the settings, the device must be restarted.

Save

Notice

The AP 'Solar-WiFi' might disappear after inverter connects to WiFi router. Turn off router or do 'WiFi Reload' operation via button on inverter if you need connect to Solar-WiFi once again.
